

HOW DO THEY COMPARE ?	 Version 10	PRODUCT 2	PRODUCT 3
Dual-certified electronic health record: CCHIT Certified® 2011 <i>plus</i> ONC-ATCB 2011/2012 (“ARRA”) certified	☺		
Correctly accounts for multiple business entities (Tax IDs) in a single database	☺		
Charts simple complaints in a fraction of a minute	☺		
Integrated with MD Guidelines, including ACOEM Guidelines and Reed Group Disability Duration guidelines	☺		
During prescribing, electronically verifies formulary from within the EMR	☺		
During prescribing, automatically checks drug, allergy and disease interactions	☺		
Electronically prescribes through national SureScripts™ network	☺		
Includes patient discharge instructions, with customizable instructions & multiple languages	☺		
Calculates patient amount due at checkout, including unmet deductible	☺		
EMR includes coded (and therefore, reportable) data in the patient chart to enable customized QI reporting	☺		
Fills state forms (e.g., CA 5021, PR2, PR4) directly from provider charting	☺		
Submits state forms with electronic claims in a single file (vs. claims in one file and attachments in a separate file)	☺		
Accepts electronic remittances	☺		
Provides direct claims submission to clearinghouse, vs. to vendor who then submits (and owns the submission)	☺		
Automatically displays orders, to enable all authorizations management from a single screen	☺		
Patient portal provides online access to labs, problems list, meds, allergies, immunizations and procedures	☺		
Produces electronic record for patient to upload to his or her personal health record (PHR)	☺		
Documents provider a single time for appointment, visit & injury records (vs. re-entering into each record)	☺		
Documents all required HIPAA privacy practices (e.g., consents, authorizations, ROIs)	☺		
Sends mass e-mails directly from the software (not just one-at-a-time)	☺		
Imports data from Health Risk Appraisal products that export it	☺		
Manages rule-based medical surveillance, including	☺		
Variable repeat testing based on job class, department or risk category	☺		
Employee exposure follow-up protocols that automatically schedule follow-up and enable reminders	☺		
Multiple employee exposure management to eliminate redundant data entry	☺		
Enables fast, accurate patient lookup with bar-codes	☺		
Links to web resources from within the program	☺		
Captures scanned documents in same, not separate database, enabling extremely fast retrieval	☺		
Scans directly to the database through Citrix/Terminal Services over WAN or the internet vs. scans locally, with subsequent upload to database (a much more time-consuming process)	☺		
Interfaces with other systems in your organization using standard HL7 transactions	☺		
Submits immunization data to state immunization registries, using required HL7 transactions	☺
