

Employer Solutions

The Science of Employee Screening™

Quest Diagnostics Employer Solutions provides employers with employment qualification programs as well as management solutions that aid in employee hiring and employee management. From pre-employment screening to random drug testing programs, we provide a full range of substance abuse testing solutions like hair testing, lab-based and instant on-site urine, oral fluid testing, and Ecstasy testing. In addition, we offer background screens and a unique wellness screening program for employers called Blueprint for Wellness™ which is comprised of program administration, physician oversight, and management.

As the nation's leading provider of employment testing, we perform more than 11 million drug tests annually at our four SAMHSA (Substance Abuse and Mental Health Services Administration) certified Forensic Toxicology Laboratories located in Atlanta, Georgia; Norristown, Pennsylvania; Lenexa, Kansas; and Van Nuys, California.

Our dedication to Six Sigma quality and industry-leading laboratory turnaround times highlight our commitment to providing our valued customers with quality services that deliver more than just test results.

As the employment screening industry shifts more toward single source solutions (pre-employment drug testing, background screening, Medical Review Officer (MRO) services, interactive web-based reporting, program management, random reports, collection reports, statistical reports and turnaround time reports all offered by one provider), Quest Diagnostics is uniquely positioned to meet the challenge through our broad collection site network and integrated web platform.
